Award Winning Valve Amplifiers

New for 2011!

designed by David Shaw

PS 2 MKII "ALL VALVE" One Box MM Phono Stage

Only valves can make the LP sound correct!

Our PS2 is a "one box" simplified version of our award winning PS1, and therefore is excellent value. It is well known that valves can sound much better than transistors, this is especially so with LP reproduction. The LP was developed in the time of valves, and without the warmth and colour of valves, transistor phono pre amplifiers can sound uninteresting and hard to listen too.

Specifications and Features

- Comprehensive manual supplied
- All hand wired point to point
- No printed circuit board to spoil the sound
- All Triode valves 2x ECC83 1x ECC81
- Sensitivity: 5mv for 1v output
- For MC may be used with our MC transformer
- Gain x 200
- Load: imp: 47k MM
- Output impedance 50 ohms
- Signal to noise level -75db
- RIAA Freq response 20hz-20khz +0 - 1db
- NO feedback used
- High quality resistors
- Hi Fi quality audio capacitors
- Silver TEFLON audio cable
- Gold plated Input/output terminals
- 220/240volts (also 115v), 40watts
- C E. ROHS
- Unit size/weight 27cm x 15cm x 13cm 2.5kg
- Shipping size/weight 38cm x 28cm x 21cm 4kg

(Specifications subject to change)
